

eco room

System for the rotational recovery of external air that allows the desired temperature to be reached with a 30% energy saving and to have healthier air.

Water and energy consumption control software to detect and correct unnecessary uses.

Card reader at the entrance to activate and deactivate whatever requires energy consumption and is not necessary during your absence.

All lightbulbs are LED or A++ low consumption and waste is recycled with ecolamp.

Removal of single-use plastics. The gel and shampoo is available in 330ml dispensers and the plastic hygiene items are now made of wood, bamboo or corn paste.

We eliminate the unnecessary plastic packaging of shower caps and slippers.

The cosmetic products at your disposal are natural, without dyes, silicones, mineral oils, or parabens.

We invite you to collaborate, making a responsible use of water. Leave your towels hanging up, if you consider continuing to use them one more day. Otherwise, we will replace them.

Taps with economizers and water aerators that save up to 45% of consumption, without losing pressure. Double push button in toilets, with half load function.

A++ energy efficiency minibars.

The residue from the bars of soap we use is collected and the Intras Foundation, which works with people with severe mental illness, recycles it and donates it to a municipal programme for homeless people in the form of new soap.

Water certified for human consumption is collected from the spring itself, with pipes and insulations that allow there to be no leaks, waste, or heat loss.

At the hotel you will find recharging points for electric vehicles, facilities to use and rent bicycles and food from local and organic sources.
